

# How are top hospitals different?

CHKS Top Hospitals perform better than the others. Here shows the percentage difference in performance on a series of key indicators:

**26% fewer** planned elective procedures not carried out

**7% lower** c-difficile rate (over 2 years)

**4% lower** mortality index (risk-adjusted)

**5% shorter** length of stay (risk-adjusted)

**3% lower** misadventure rate (ICD-based)

**Better** on **50%** of patient safety indicators

If all hospitals achieved the same average performance as top hospitals, then across England, Wales and Northern Ireland there would be:

**4,000**  
fewer patient mis-adventures

**2,100**  
fewer cancelled procedures

**4,400**  
more beds available

**1.6m**  
fewer bed days required

# Did you know?

We process **1.35bn** rows of data every year - to derive actionable information for healthcare decision making.

In the last 12 months alone, our Cymbio team have delivered **20,000 days** of pathway validation.

We audit over **200,000** patient episodes every year.

The technology of our healthcare decision team supports over **320 million** people globally.
