Condition Profiling
The intelligent approach to monitoring specific conditions

“City Hospitals Sunderland has found its relationship with CHKS invaluable in understanding, analysing and addressing variations in quality, performance, patient safety and outcomes. The expertise and close partnership that CHKS provides in both providing near real-time performance data and its ability to undertake detailed analysis for us has been vital in improving our outcome and performance in a number of areas.”

Les Boobis, Chief Clinical Information Officer, City Hospitals Sunderland NHS Foundation Trust.

The Challenge

Proactive management of long term conditions is not only better for patients but helps lower pressure on unplanned care services by reducing admissions and bed days. Through ongoing monitoring of conditions, healthcare providers and commissioners can assess the effectiveness of new models of care and focus acute services on those patients with the greatest need.

The CHKS Solution

Condition Profiling is a programme designed to help healthcare providers and commissioners monitor specific conditions by examining key core indicators such as length of stay, mortality and readmissions. From monitoring progress against Keogh ambitions to informing service development and redesign, Conditions Profiling can be used to drive improvement in patient care for the following conditions:

- Pneumonia and Hospital acquired pneumonia
- COPD and bronchiectasis
- Urinary tract infection
- Cerebrovascular disease including stroke
- Myocardial infarction
- Diabetes
- Septicaemia
- Congestive Heart Failure; non-hypertensive
- Regional enteritis and ulcerative colitis
- Alcoholic liver disease
- Abdominal pain
- Chest pain
Consultancy support

Your dedicated CHKS consultant will prepare a quarterly briefing of the key issues affecting your trust for you to investigate further. In depth analysis of these issues can be provided using days from an existing Insight Programme or through the purchase of additional consultancy days.

Who is the programme for?

Condition Profiling is designed to help acute and community providers and commissioners monitor the effectiveness of their long term conditions strategies and care models.

About CHKS

CHKS is one of the UK’s leading provider of healthcare intelligence and quality improvement services. In the last 25 years we have worked with 374 healthcare organisations worldwide. This makes us the provider of choice with the broadest range of services and highest level of expertise and knowledge. With 70% of acute healthcare providers in the UK choosing CHKS to support them on their improvement journey, we have the skills and know-how to help you boost quality, cost and efficiency in your organisation.
